

ZiBlue steps up its international growth

The company acquires Everygo, creator of ImperiHome, the leading multibrand app for Smart Home and connected device management.

Sophia Antipolis, August 28, 2017 - ZiBlue announces the acquisition of Everygo, creator of ImperiHome, the multibrand app for connected devices and home automation management.

ImperiHome is currently the number one solution in its category and already benefits from a strong position on the international market.

In addition to the French market, ImperiHome is well established on the United States and German markets. The app is available in India and Austria as well, under a generic label.

Available through the Google and Apple stores, ImperiHome manages over 50 connected devices (such as Netatmo, Nokia Health, Nest, Fitbit, Sonos, Philips HUE to name just a few) and over 10 different smart home ecosystems (such as Vera, Wink, Zipato, Eedomus, Jeedom and more).

It brings together hundreds of smart communicating devices.

A STRATEGIC ACQUISITION FOR ZIBLUE

This acquisition allows ZiBlue to strengthen its services geared toward large accounts in search of proven, performing and adaptable technologies in order to provide their own home automation, security, energy management and/or assistance offers.

Moreover, thanks to its API "ImperiHome Standard System", every connected device manufacturer can join a unique platform for *Early Adopter* users on the connected devices and Smart Home market.

"The Smart Home or Smart Building development involves interoperability of affordable technologies, ease in offer deployment and data acquisition bringing a genuine benefit for the consumer," says Laurent Perez, President of ZiBlue.

A NEW IMPERIHOMES VERSION ALREADY AVAILABLE

This acquisition comes at the same time as the new ImperiHome 3.0 version launches on Apple and Google stores.

Among the new features, it integrates the WINK Smart Home environment (very well known in the US market), YEELIGHT connected light bulbs, a new design, and more.

ZiBlue's ZiHome software will launch Q4 of 2017 and be integrated in to ImperiHome to transform every connected device (TV, TV box, Internet box, tablet, robot, Raspberry...) into a multi-protocol Smart Home hub in less than one minute.

ZiBlue's technologies make the deployment of service offers easier at a much lower cost than other existing solutions. These innovations make Smart Home services more accessible.

ZiBlue will be at the Université SB4SC in Lyon on August 30 and 31, at the Alarme Protection Sécurité (APS) show in Paris which takes place from September 26 to 28, and at the Smart City Expo World Congress 2017 show in Barcelona from November 14 to 16.

About ZIBLUE: Created in March 2016, ZiBlue develops innovative technologies to popularize Smart Homes and Buildings by focusing on interoperability and by reducing access costs. It was incubated at Telecom Paris Tech and was awarded the label "Innovative Company of the French Clusters" by the SCS and Systématique clusters. ZiBlue has offices in Paris, Grasse and Sophia Antipolis.
